

Python Practice

1. Write a program to accept a string from the user and display characters that are present at an even index number.
2. Write a Python program to count the number of strings from a given list of strings. The string length is 2 or more and the first and last characters are the same.
Sample List : ['abc', 'xyz', 'aba', '1221']
Expected Result : 2
3. Write a Python program to remove duplicates from a list.
4. Write a Python program to find the list of words that are longer than n from a given list of words.
